THE POWER OF SINGLE TASKING IN TRAINING

In a world that rewards multitasking, elite athletes know the real key to improvement is single-tasking—focusing on one thing at a time with full attention.

🔥 Why Single-Tasking Boosts Performance

✅ Improves skill development by maximizing quality reps
✅ Strengthens focus and mental discipline
✅ Reduces errors caused by split attention
✅ Builds muscle memory faster for automatic execution

🎯 How to Train with Total Focus

1️⃣ Set a Clear Intention Before Training
- Ask yourself: What's one thing I want to improve today? (e.g., "Quicker footwork," "Stronger follow-through," "Better communication")
- Keep this goal in mind throughout practice.

2️⃣ Eliminate Mental Clutter
- Keep your mind on the present drill—not what's next or what happened earlier.
- If distractions creep in, use a focus reset:
- ✅ Deep breath
- ✅ Quick shakeout
- ✅ Power phrase (Lock in. Next rep.)

3️⃣ Fully Commit to Every Rep
- Quality beats quantity. A focused 10 reps at 100% are better than 50 distracted reps.
- Stay engaged by asking: How can I make this rep better than the last?

4️⃣ Use Cues to Stay Locked In
- Find a visual anchor (e.g., the ball, the net, your opponent's movement).
- Use a verbal cue (e.g., "Explode," "Stay low," "Strong hands").

5️⃣ End with Reflection
- After practice, ask:
  - Did I stay focused?
  - What worked?
  - What's one thing I'll improve next time?

🚀 Quick Single-Tasking Tip

Struggling to stay focused? Use the 5-Rep Rule:
- Commit to 5 perfect reps with full attention before resetting.
- Small focus wins lead to big performance gains.

🏆 **Bottom Line:** The best athletes don't just work hard—they work with focus. Train your mind to stay locked in, and your performance will follow.
